

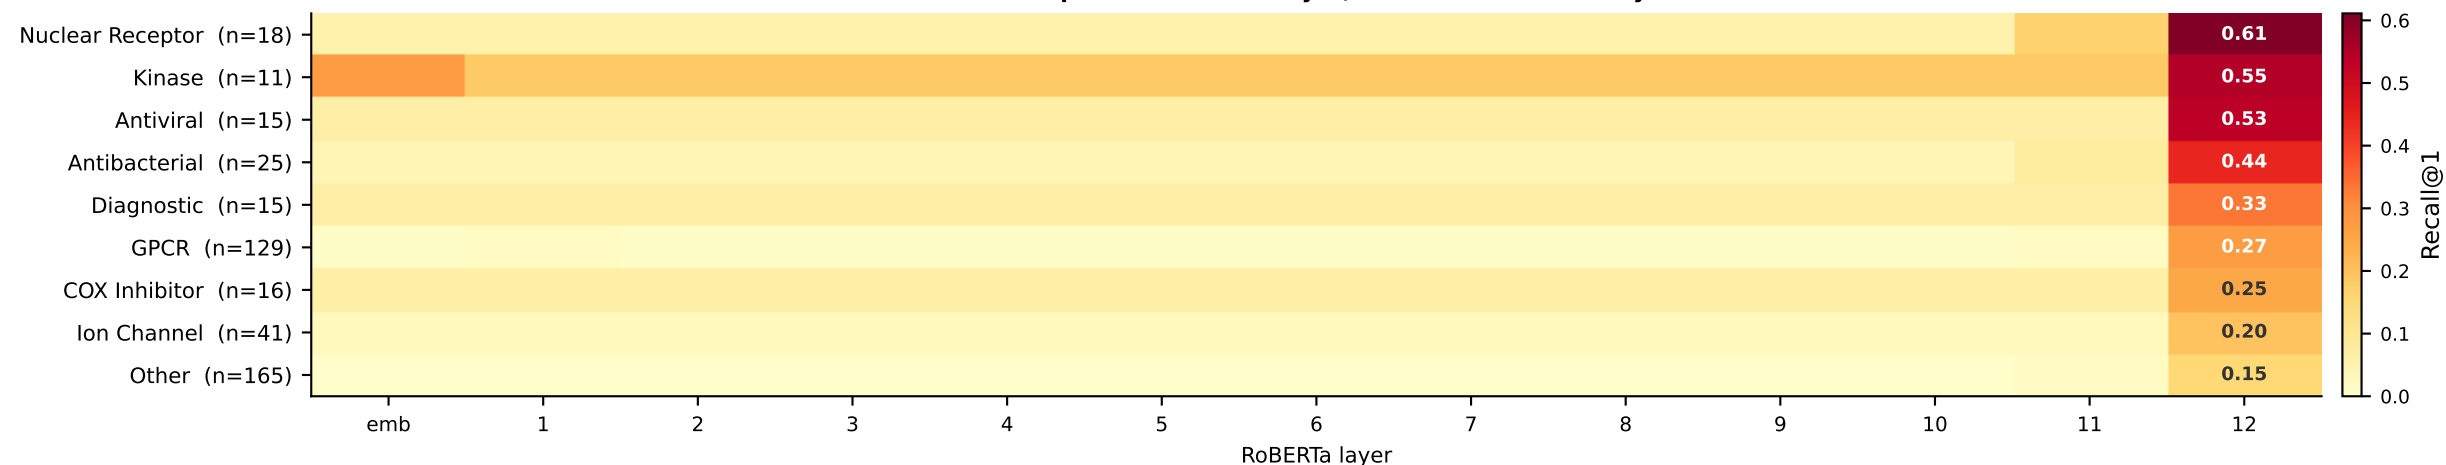

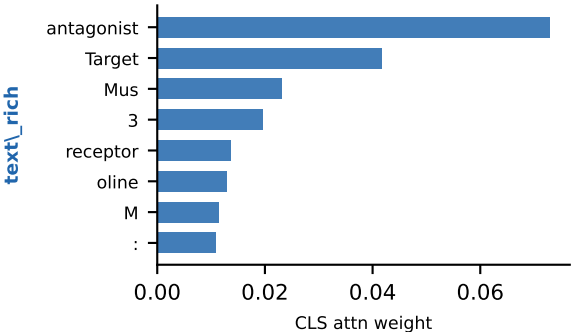

Figure 7 Logit lens detail: per-family emergence heatmap and layer-12 CLS attention to mechanism vs. drug-name tokens

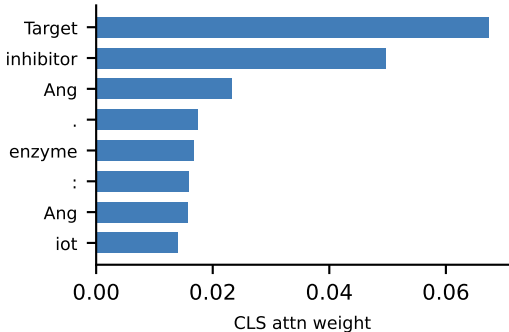

(A) Per-mechanism-family Recall@1 across RoBERTa layers (text_rich)
All families peak at the final layer; value annotated at layer 12.

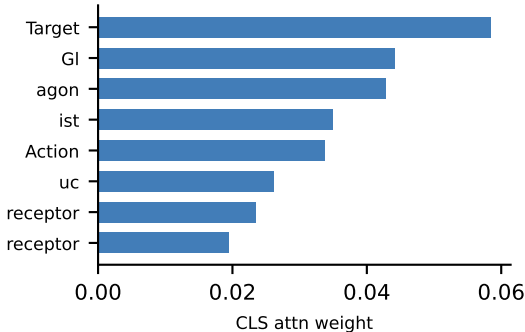

(B) Mepenzolate Bromide (GPCR)
sim=0.405

(C) Trandolapril (Other)
sim=0.588

(D) Hydrocortisone (Nuclear Receptor)
sim=0.618

(E) Tenofovir Disoproxil Fumarate (Antiviral)
sim=0.481
